# active payment solutions

Simple and Easy:
- To install
- To update
- To use

active:web

The ultimate payment processing solution providing all the features of active:check via a web browser interface. Enables you to :

- Return issues to the originating branch from the central processing centre
- Distribute resource pools geographically
- Handle peaks by utilising distributed resources
- Update remote installations across the internet

General

Simple customisable screens created from a fully featured library of graphical and numeric tiles. Select your preferences for:

- Colours
- Sizes
- Positions

All graphical charts can be printed or saved as JPEG, PNG, PDF or SVG files.

Auto Cut-Off

Work is automatically scanned into the current business date. The session deadlines are controlled centrally and the next available business date is automatically selected after the session cut-off.

A countdown to the end of the session is displayed enabling you to prioritise your workflow.

Capture

Scan directly into central site without file transfer. Allows you to have immediate access to scanned work.

DCB

A combined dashboard for Data entry, Corrections and Balancing is tailored to suit the different types of user. Your work queues can be merged to give an overall picture of the current status.

The DCB functions can be carried out from whichever location you choose, for example at a central site, branch, or specialised DCB site.

Quick and easy to bounce a batch back to originating branch for Branch Assist if items are missing or need re-scanned - configuration options make sure that your branches only see their own work.

Enhanced yet simplified:

- Display of multiple images
- Automatic batch selection for all statuses of work including 'Balance Required'
- Easy zoom to magnify critical text 'Item Countdown' making it easy to see the number of items that still need fixed
- New Expert Balancer to assist and suggest ways to balance the batch

Exception Review

Your branches can resolve their own exceptions.

Missing items or problem batches can be investigated and any necessary items can be re-scanned.

Supervisor

Fully customisable multi-page dashboard tailored for your particular installation and architecture – whether you are an individual bank, a centralised clearing house or a member bank of an automated central clearing system.

Filters easily configured: branches only see their own status & reports, filter by site / branch, filter by origin / member bank.

Fully featured tile library:

- Calendar
- Work source summary
- Remote site / branch summary
- Runs / batches
- ICL arrivals / departures
- ICL import activity by member bank
- ICL origin statistics
- Session countdown
- Delivery timeline
- End of day tasks (exports and reports)
- Task queue
- Reports log / PDFs
- Member bank net settlement positions
- Net settlement positions
- Distribution breakdown
- Session timeline
- Category / distribution totals
- DCB status
- Post balance status
- Operator activity
- Broadcast alerts
- Scanner / track statistics

Centralised

Data is secure and easy to backup.

Installation is low cost with quick and easy updates and maintenance.

Deployment

Centralised install - avoids installation costs on each client machine.

Compatibility

Compatible with existing installations.

Regulatory

Centralised audit of all activities - what happens at a branch is really just happening centrally.

Automatic inactivity checking.

Login

Single sign-on and launch pad.

Support & Maintenance

Updates are easier - no need to distribute customisation / application updates across workstations / branches.

No need for version checking.

Platform Independent

Can be run on a PC, mobile or tablet.

Bigger Picture

active:web is Aperta's browser based solution consisting of optional modules to enhance the existing cheque payment solutions and forms part of their payment solutions suite **aps** (active payment solutions). Aperta has been in business since 1992 and has over 400 installations worldwide.
